Discover the power of video

We create innovative solutions that guarantee people's security and organisations' growth

Protect your investment with tools that deliver optimal operational efficiency.

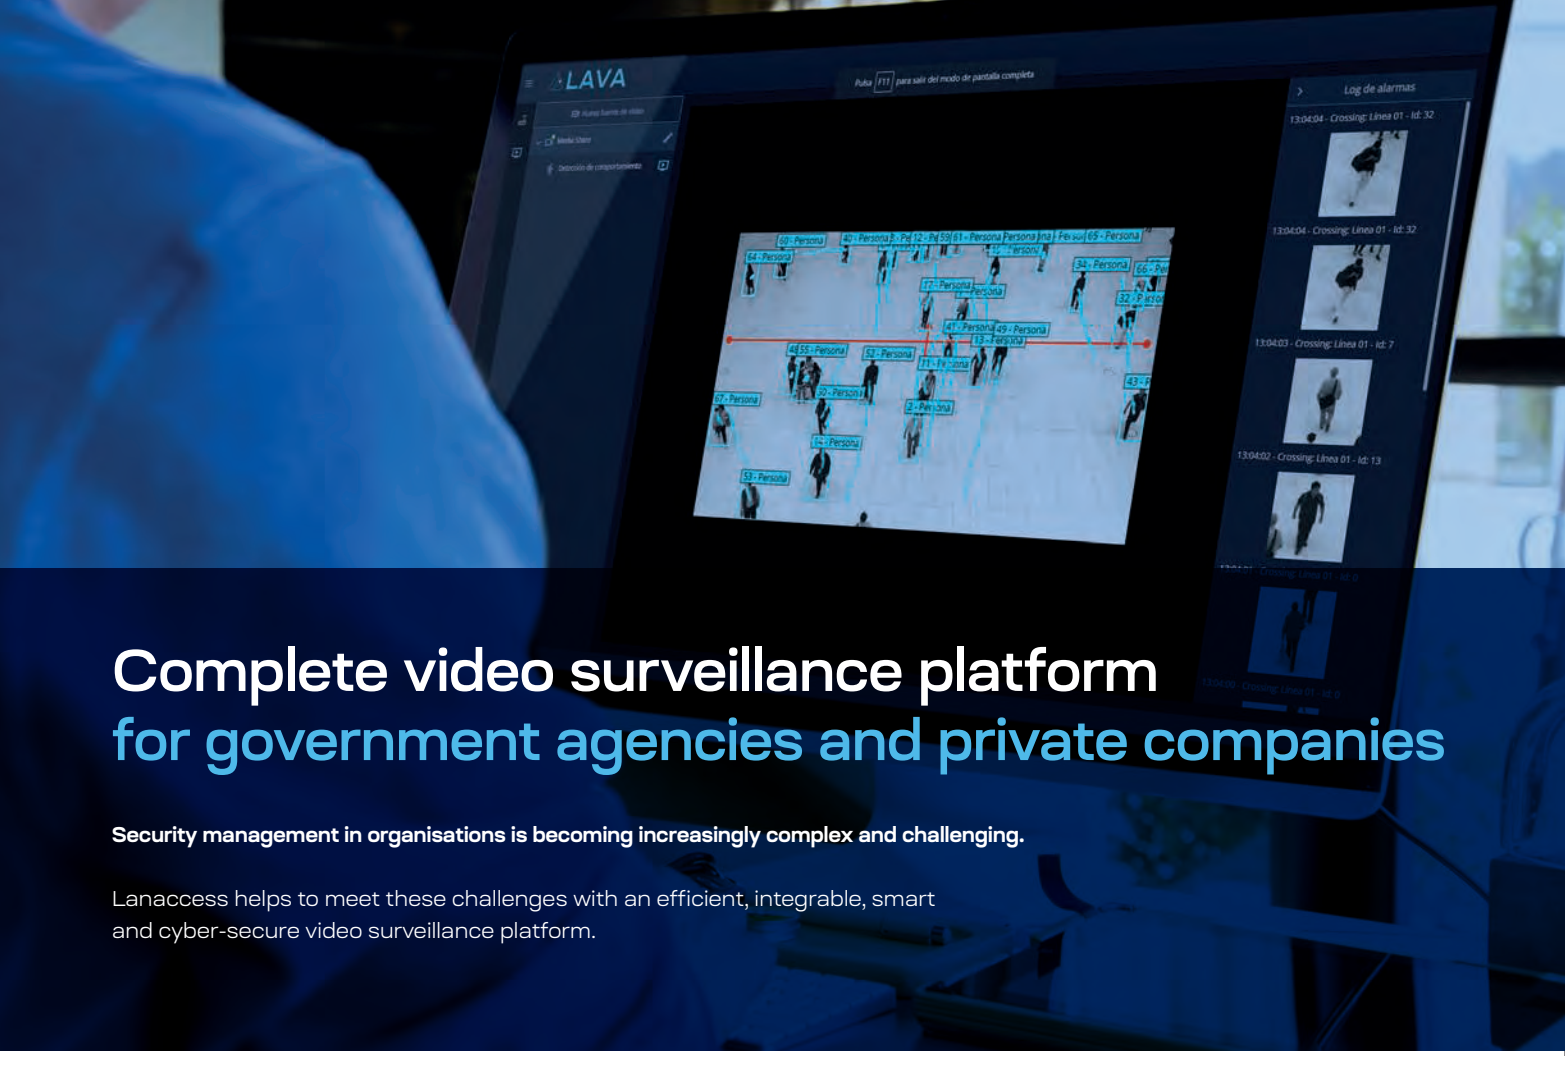
Solutions designed to be integrated with other manufacturers.

Analytics services that transform every image into a valuable asset.

The risk of cyber-attack is mitigated with technology developed and manufactured in Europe.

European technology
We stand behind our commitments

LANACCESS
Discover the power of video.



Complete video surveillance platform for government agencies and private companies

Security management in organisations is becoming increasingly complex and challenging.

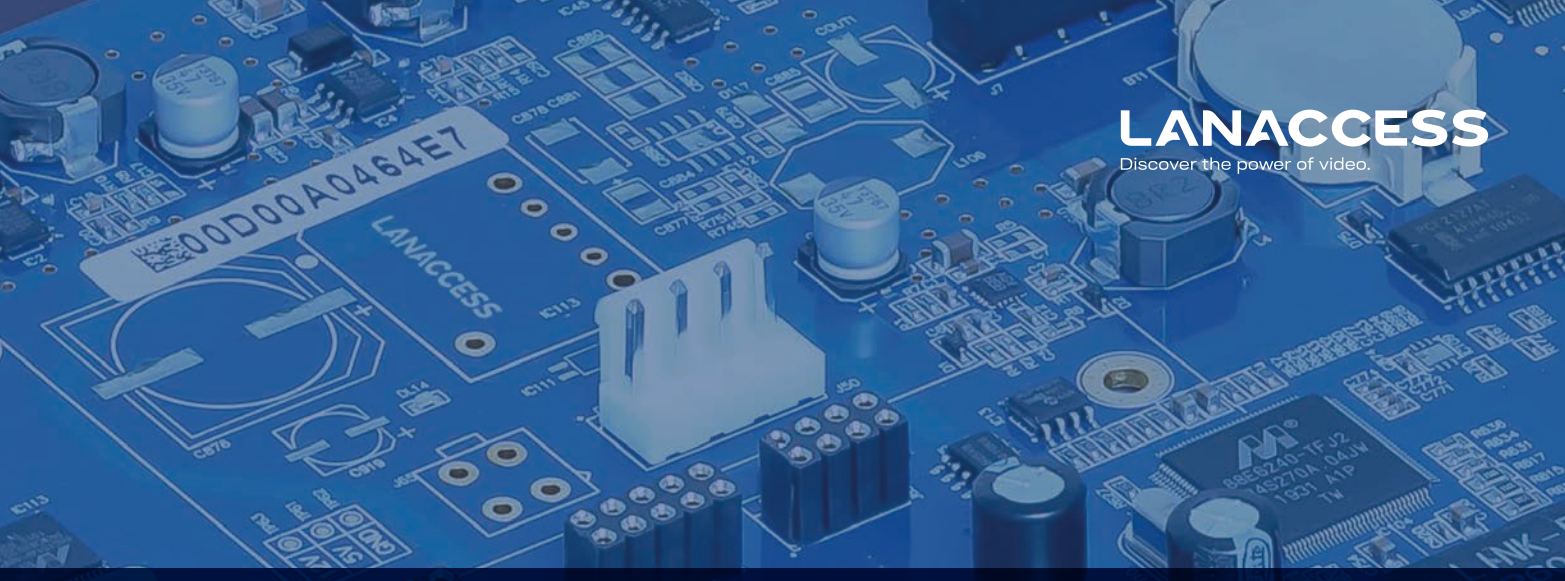
Lanaccess helps to meet these challenges with an efficient, integrable, smart and cyber-secure video surveillance platform.

Efficient
High-performance industrial technology that ensures minimal power and bandwidth consumption. Efficiency is boosted by ongoing user training.

Integrable
We use the ONVIF protocol to facilitate interoperability between different manufacturers' equipment. The Lanaccess team is continuously working on new integrations.

Smart
Our algorithms equip any video surveillance system with artificial intelligence. The BI software developed by Lanaccess allows the data generated to be extracted and analysed.

Cyber-secure
Hardware manufactured in Europe and assembled by us in Barcelona. Software developed and encrypted in our R+D+i centre. Our technology regularly undergoes the banking sector's controls, which are among the most stringent in the industry.



LANACCESS
Discover the power of video.

Guaranteed reliability
global compatibility, European manufacturing

For over 25 years, we have been designing and manufacturing software and hardware with protocols that allow integration with other manufacturers' equipment.

We manufacture in Europe, and are recognised as a company with high quality standards and that is a constant source of innovation in security systems.

ONVIF® | STG

We use the standard protocol
It allows interoperability between manufacturers' products.

NDAA Compliant

NDAA certified
We comply with the most rigorous US regulations.

MADE IN EUROPE

Made in Europe
We are a multinational with manufacturing in Spain.

INNOVATIVE SME

GOBIERNO DE ESPAÑA · MINISTERIO DE CIENCIA E INNOVACIÓN

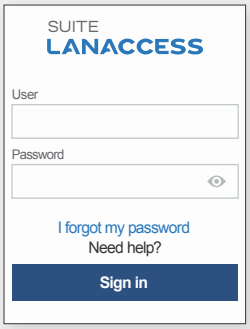
VMS

Streamline the management of all your video surveillance resources.

Through a modern and intuitive interface, you can monitor video and other key security systems in real time.

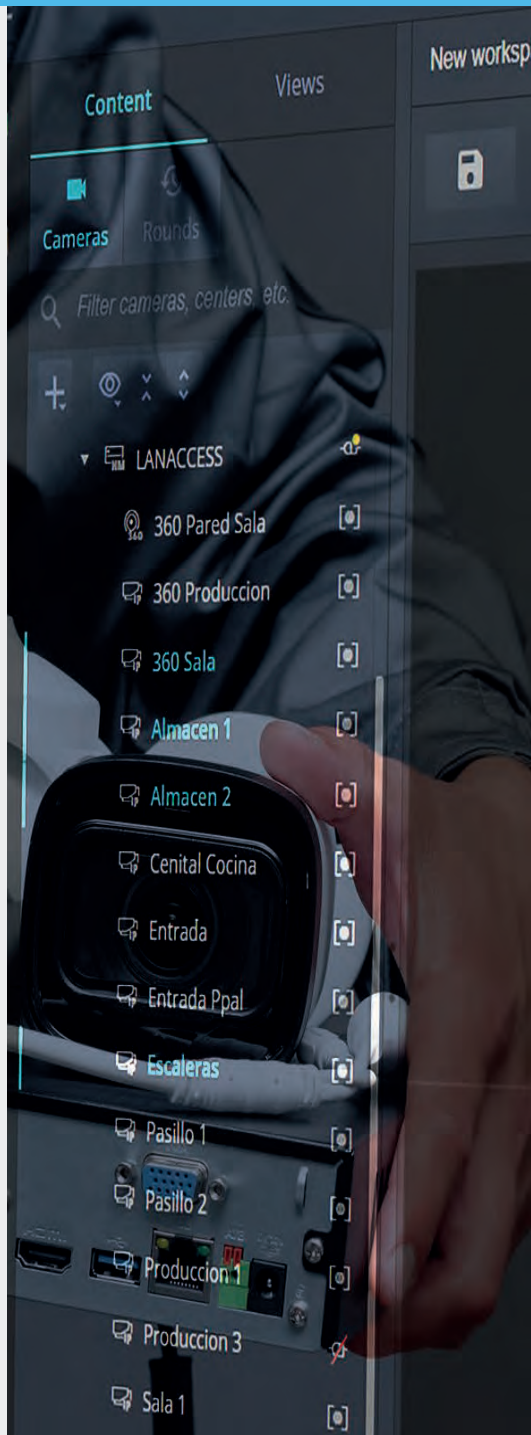
Make use of smart video analytics based on deep learning to respond quickly to important events and automate all other tasks.

www.lanaccess.com



Suite Lanaccess
Management software accessible from any browser.

Equipment status
Modules available for automatic monitoring of every element of the CCTV system.



Video recorders

Sturdy devices designed specifically for video management.

The cold technology of these devices reduces power consumption and eliminates the need for preventive maintenance. It also extends their service life. Compact, purpose-built firmware speeds up image processing.

The devices leave our factory with a custom configuration wizard to avoid errors and to speed up set-up.

Configuration in five minutes
30% energy savings
Maintenance-free
Cost reduction

Wall-mounted chassis
Anti-tampering device, with UPS supply.

Hybrid
Suitable for migration from analogue to IP.

IP devices
Up to 28 PoE ports.

Cluster
Capacity for 250 cameras.

Onboard avionics
DO-160 certified.

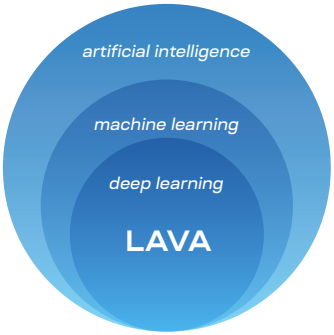
Analytics

Transform every image into a valuable asset.

Lanaccess Advanced Video Analytics (LAVA)
Video analysis based on deep-learning neural networks that we have developed, which allows us to equip any video surveillance system with artificial intelligence.

BI Xplorer
Business intelligence software that allows the information generated to be exploited and reports and statistics to be developed.

Cameras with analytics
The analytics included in the cameras include tampering, abandoned object, presence, line crossing or loitering and the logical combination of the above



LAVA APPEARANCE
Gender and age detection.

LAVA RAILS
Crossing and falls on tracks.

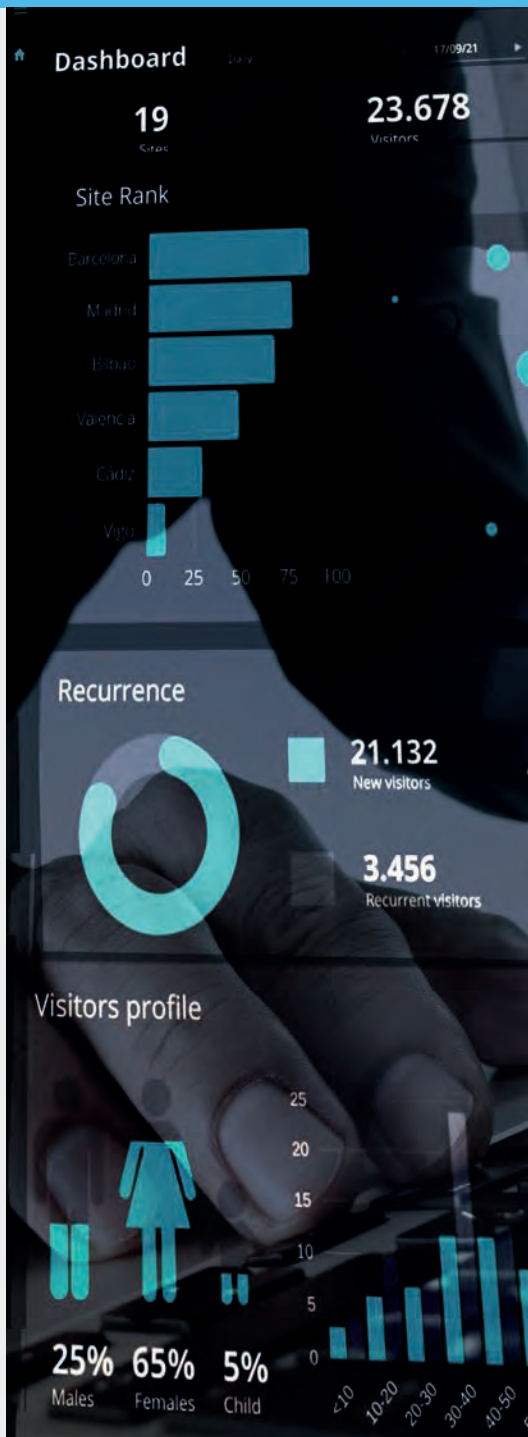
LAVA PROTECT
Perimeter protection.

LAVA COUNT
Element counting.

LAVA DENSITY
Occupancy density

LAVA OBJECTS
Object detection.

LAVA COVERED
Covered face detection.



Cameras

Wide selection of IP cameras.

Available in bullet, dome, mini-dome, pinhole, panoramic, multi-sensor and fisheye formats.

Thermal camera
Example of one of the cameras equipped with smart functions.

Display

Video wall and other visualisation technologies.

Visualisation devices that turn surveillance posts into smart control centres.

Scalable with no limitations and manageable locally or remotely.

Smart Monitor
Surveillance post with no need for a PC.

Smart Touch Pannel
Surveillance post with just a touchscreen.

Integrations

VMS can be integrated with third-party products.

ONVIF system suitable for integration with other manufacturers' products.

We have SDK for third-party platforms and integrations with the main alarm receiving centres (ARCs) on the market:

MAS

sbn

Manitou

- NVRs
- ATMs
- Alarm control panels
- Encoders
- IP cameras
- IP video door phones
- IP automatic doors
- IP speakers
